January 29, 2016

To All H.V.A.C. Contractors:

Please see the attached flyer announcing the first of what is hoped to be a series of H.V.A.C. journeymen/apprentice upgrade classes that we are planning to hold here at the training center.

We are asking that you please distribute this flyer to all of your service techs in an effort to attract interest for these classes. If you agree with the benefits these classes could produce and would like to see more of them offered, please help us encourage attendance.

Our hope is to offer more classes in the near future and feedback from attendee's will help us formulate ideas and directions for those classes.

Thank you as always for your support and assistance.

Randy L. Canale
Training Coordinator

U.A. Local 350 JATC

Carlyle Compressor course

February 17, 2016 5:00-8:00 p.m.

This class is going to consist of both hands on training as well as theory and operation review. We will be covering proper maintenance procedures for reciprocating compressors as well as troubleshooting procedures. This will include proper oiling system check out and servicing as well as procedures for checking the internal workings of the compressor. This is intended to give the infield technicians the ability to provide value added services to their customers. We will be reinforcing all training with hands on tear down of the Carlyle O6E compressor to be able to better understand the internal workings of the reciprocating compressor.

Class will be presented by instructors Kevin Meyer, Brandon Bloxham, and Robert Bloxham.

This will be the first in a series of HVACR journeyman upgrade/training classes and we are hoping for a good turnout. The local is trying to make a push in the right direction as far as training and hopes these efforts are well received by the membership.

Interested persons should call the training center at 359-2229 as soon as possible to get on the class roster and better assist us in planning for the class.
